Privately published under the auspices of the
EXECUTIVE COMMITTEE OF THE
FRIENDS OF THE ARMY MEDICAL LIBRARY
Washington, D. C.

The Importation of Published Material from Europe

Among the questions being asked by those who have responded to the invitation to join the organization of Friends of the Army Medical Library is in regard to the receipt of foreign journals. In reference to this the Librarian has kindly prepared the following statement.

Almost immediately, following the outbreak of the war in Europe, there was noted an effect upon the orderly flow of publications, especially from the Continent. Material originating in Germany was held up by the British blockade while that from other countries began to be delayed.

As early as November, 1939, a Leipzig dealer with whom the bulk of the Library's foreign journal subscriptions had been placed, routed a case of material in care of the American consulate in Rotterdam. After several delays, this reached the Library in February, 1940. A second case came through from this dealer late in May; but a third despatched from Leipzig late in April has not yet turned up despite all inquiries.

Naturally this Library, being an institution supported by Federal appropriations, often receives aid from the Department of State. The consular service has expedited a number of shipments but does not undertake the handling of small pieces of mail matter. Certain New York dealers who have branch offices on the continent have likewise availed themselves of the consular service; recently two packages of journals were received through this channel, and it is believed that they were routed through Lisbon.

Most of the German journals received by the Library are purchased. Judging by the few which are received gratuitously, there is reason to believe that the British authorities make a distinction between material sent out by a commercial dealer and that mailed by the publisher. As an example, in the case of the *Wiener Klinische Wochenschrift*, which comes directly from the publisher, all but six of the weekly issues from January to the third week in November, 1940, inclusive have been received.

A large American medical publishing house sending its journals to all the chief publishers of like material on the continent, would of course expect to have an extensive list received without charge on an exchange basis. If most of this arrives safely, the recipient feels fairly well served, as completeness of the runs is of secondary importance.

(continued on inside rear cover)

2. Anthropology, Ethnology

Am. J. Phys. Anthropol., 1940, 27:

- BONELSON, E.G., OHLSON, M.A., et al. Anthropometric data on college women of the middle states. 319-32.
- BOYD, W.C. Critique of methods of classifying mankind. 333-64.
- CANDELA, P.B. Reliability of blood-group tests on human bones. 365-81.
- HRDLICKA, A. Lower jaw; further studies. 383-467.
- LANIER, R.R. Effects of maceration and drying on presacral vertebrae. 469-77.
- CANDELA, P.B. Serology of the anthropoid apes. 479.
- HRDLICKA, A. Locomotion in gibbon. 481.

3. Bacteriology, Microbiology

Acta brevia neerl., 1940, 10:

- WATERMAN, L. The action of adrenaline and cortin on isolated frog's muscle. 167-70, pl.
- DEMUTH, F. Zuchung von Kaninchenovarien in vitro. 170-4, 4 pl.
- DEMUTH, F. Testosteron und Samenblasenepithel in vitro. 174-7.
- SOTIRIADOU, E. Effect of oestrogens on hypophysectomized female mice. 177-9.
- HAEX, A.J.C., & KORTHOFF, G. Die Wirkung von Drogen bei Meningitis cerebrospinalis epidemica. 179, pl.
- SCALONGNE, H.W. On a sex-difference in the vitamin A and carotene content of human bloodserum. 181.
- LUBSEN, N. Observations on the cerebral circulation of the rabbit; in particular on the influence of the sympathetic nervous system. 183-5.
- FREUD, J. Quantitative histology of rat ovaries. 186-9.

Arch. Protistenk., 1940, 94:

- REICHENOW, E. Der Entwicklungsgang des Kustenfiebererreger im Rinde und in der übertragenden Zecke. 1-56, 3 pl.
- GELEI, G. Cinetochilium und sein Neuronensystem. 57-79, pl.
- JIROVEC, O. Zur Kenntnis einiger in Oligochaten parasitierenden Protisten. 80-92.
- BARTOS, E. Studien über die moosbewohnenden Rhizopoden der Karpaten. 93-160.

Bol. Lab. Clin. Luis Razetti, 1940, 1:

- CORTES LLADO, M., BRICENO-IRAGORRI, L., & IRIARTE, D.R. Consideraciones sobre la dispepsia de fermentación la indigestión de feculentos y las colitis acidas. 27-38.

4. Biology

Human Biol., 1940, 12:

Today practically nothing is coming from France, and the journals that have been received date from late 1939 and early 1940. About half a dozen of the Italian journals have come in, all of these dating from the fall of 1940. A few journals have arrived from Hungary, Scandinavia and Switzerland. British material including books, while delayed makes its appearance regularly. South American material comes by fits and starts, the lack of salesmanship on the part of the publishers possibly being a factor in this.

This Library, with its subscription list almost entirely paid for is obliged to import in fairly large consignments through the consular service, or else to store the material on the Continent. In any event complete files in most cases are fully assured when the war is over.

The Committee on the Importation of Foreign Periodicals set up by the American Library Association, has been occupied with this problem during the year, and in its Statement Number Three, issued in September, 1940, the Committee strongly recommends storage for the duration of the war in Leipzig or Rome, as the best and safest solution of the difficulty.

On the whole the situation might be worse and perhaps it will be. Meanwhile the Army Medical Library is endeavoring to comb the Western Hemisphere more thoroughly for worth while publications of medical interest, and is preparing to roll up its sleeves for a job of indexing when the material stored in Europe at last finds its way here.

Concerning the Need of an Index to the Current List

Undoubtedly, Many who have examined this publication have questioned the purpose of the numbers printed in the central column of each page. These were intended to facilitate the location of titles in case it was later decided that an index was needed. The uncertainty in this regard, however, results from the fact that the Quarterly Cumulative Index Medicus furnishes a convenient means of searching the prior literature. An index to the Current List would consequently be largely a duplication and its expense would probably not be justified by the use made of it.

The Current List is simply a ready reference to be used as issued. Notes of the papers which one may wish to keep in mind may be jotted on the rear cover of each number. In this way each one can make the amount and character of index best suited to his particular needs. Comments on this subject from those who find the Current List useful to them are invited and should be addressed to
